

Vessel is large, cumbersome, loaded down w/ white Superstructure aft, a dark colored hull, reddish color decking, dark blue or black funnel with lighter orange or red band (funnel matches vessel color scheme). Something of interest is located on extreme starboard side, approx $\frac{1}{3}$ of way ^{back} from bow, slightly above main deck ^{level} (see diagram, p. 5a). Associated with this is an impression of several (5 to 10) rounded/^{cylindrical} ~~spherical~~ containers, about 2 ft. high by 1 ft. diameter, made of metal, with which the color yellow is associated. Contents of ~~these~~ these containers remind me of crystallized honey, but there is a bitter/acidic taste associated.
